The vascular bundles present no very remarkable features. The Xylem, consisting of short tracheides, is placed above the Phloem, and there is no cambium. In cylindrical leaves, like those of the Stonecrop, which are not bifacial, a centric type of structure is found, the tissues being arranged symmetrically, and the mesophyll without a palisade layer, while both vertically extended leaves and phyllodes are isobilateral, with palisade parenchyma on each side. Leaves, like stems, may be either glabrous or more or less covered with hair of various kinds. CHAPTER IX.--REPRODUCTIVE ORGANS OF ANGIOSPERMS. As has already been seen the flowers of higher plants may be much more highly specialized than those of Pinus, and the word flower was in fact first...
